

Summary of Diabetic Retinopathy (DR) Exam Result

Date: 05-27-2024

Detected Severity of Diabetic Retinopathy:

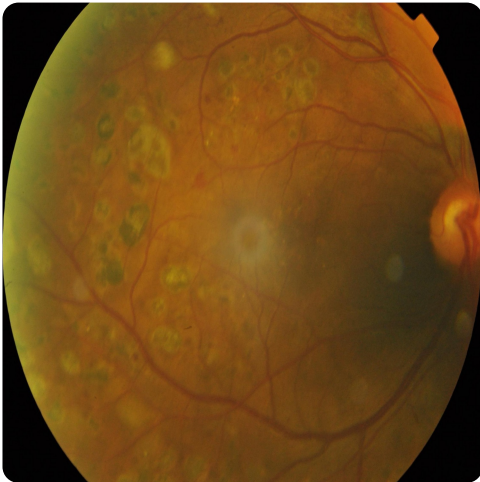

Mild Diabetic Retinopathy

Early signs of diabetic retinopathy are evident, characterized by microaneurysms - small areas of swelling in the blood vessels of the retina. At this stage, there typically aren't noticeable symptoms affecting vision, but it's crucial to monitor the condition closely. Yearly eye exams are recommended to track any changes and manage diabetes effectively to halt the progression.

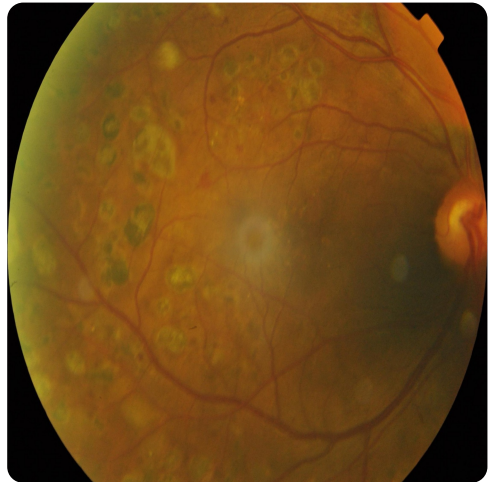

Repeat exam in: **1 Year**

Referral to Ophthalmologist: **Not Required**
